

REFURBISHING THE SHOWER ROOM? DON'T FORGET THE HEATING

Despite the cold, the snow, the ice and the short days, now is the time to plan that Springtime refurbishment of the bathroom or shower room. Thinking about a new bath or shower room at this chill time of the year will remind homeowners not to forget the heating. There is nothing worse than stepping out of the warm bath or shower on to a freezing cold floor. The perfect solution is to install underfloor heating, and both CosyfloorTM and Ecofloor are suitable for wet areas.

Cosyfloor™ consists of thin profile, double insulated cables that are attached to a reinforced open weave mat. These mats can be laid around fixed objects – such as pedestal wash basins or round a shower enclosure – making it exceptionally adaptable and convenient for most areas.

Ecofloor cable kits comprise a drum mounted ultra thin cable fitted with high impact adhesive fixing tape to keep the cable in place.

Both systems can be installed on any solid based level floor and are ideal for gently warming cold surfaces such as tiles, marble, natural stone and hardwood.

You can set your own temperature levels via a programmable, or simple on/off thermostat and the systems are easy to install, silent, unobtrusive unlike bulky radiators, and economical to run.

Price: £29 per square metre.
